---

好味道主要是靠舌頭和鼻腔內的神經細胞的共同作用。在太空裡微重力會讓身體中的液體平均分佈到全身，體液阻塞了鼻腔通道，連帶使舌頭腫脹、味覺受到影響。

---

Delicious flavors arise from the combined reaction of neurons on the tongue and within the nose. The microgravity environment of space causes the fluids in our bodies to be evenly distributed throughout the body. These fluids block the nasal cavity and also cause the tongue to swell, therefore affecting the ability to taste.

神經細胞因為環境而影響其作用，稱為神經細胞的適應作用。原本舌頭上用來辨別甜、苦、酸、鹹各種不同滋味的味蕾，也受影響。

The influence of the environment on neurons is known as neural adaptation. The taste buds of our tongues, which distinguish between sweet, bitter, sour, and salty flavors are also affected by this phenomenon.

---

太空人鼻腔的神經細胞已適應太空站內的環境,因此嗅覺也有異於平常,所以同樣的食物卻感覺不出印象中的美味了。

---

Astronauts' neurons adapt to the environment within the space station; therefore, their sense of smell also changes. As a result, they are unable to experience the same delicious flavors of foods they once enjoyed.
