Tamaketeketane ikai ki  
balrilawlaw ka Taludru

Let's Build A Bridge

彩虹橋的約定

Yakai ku taludru ki babalebale, kui  
Siniyu la-iyakai: bwala ta lailai  
mutaludru, lu Iri ka-aneane ku  
maryaridarenga?

There was a small bridge in the bamboo forest, and Giwas said: “Let’s see who can run across the bridge the fastest!”

竹林裡有一座小橋，吉娃斯說：「我們來比賽看誰過橋最快！」

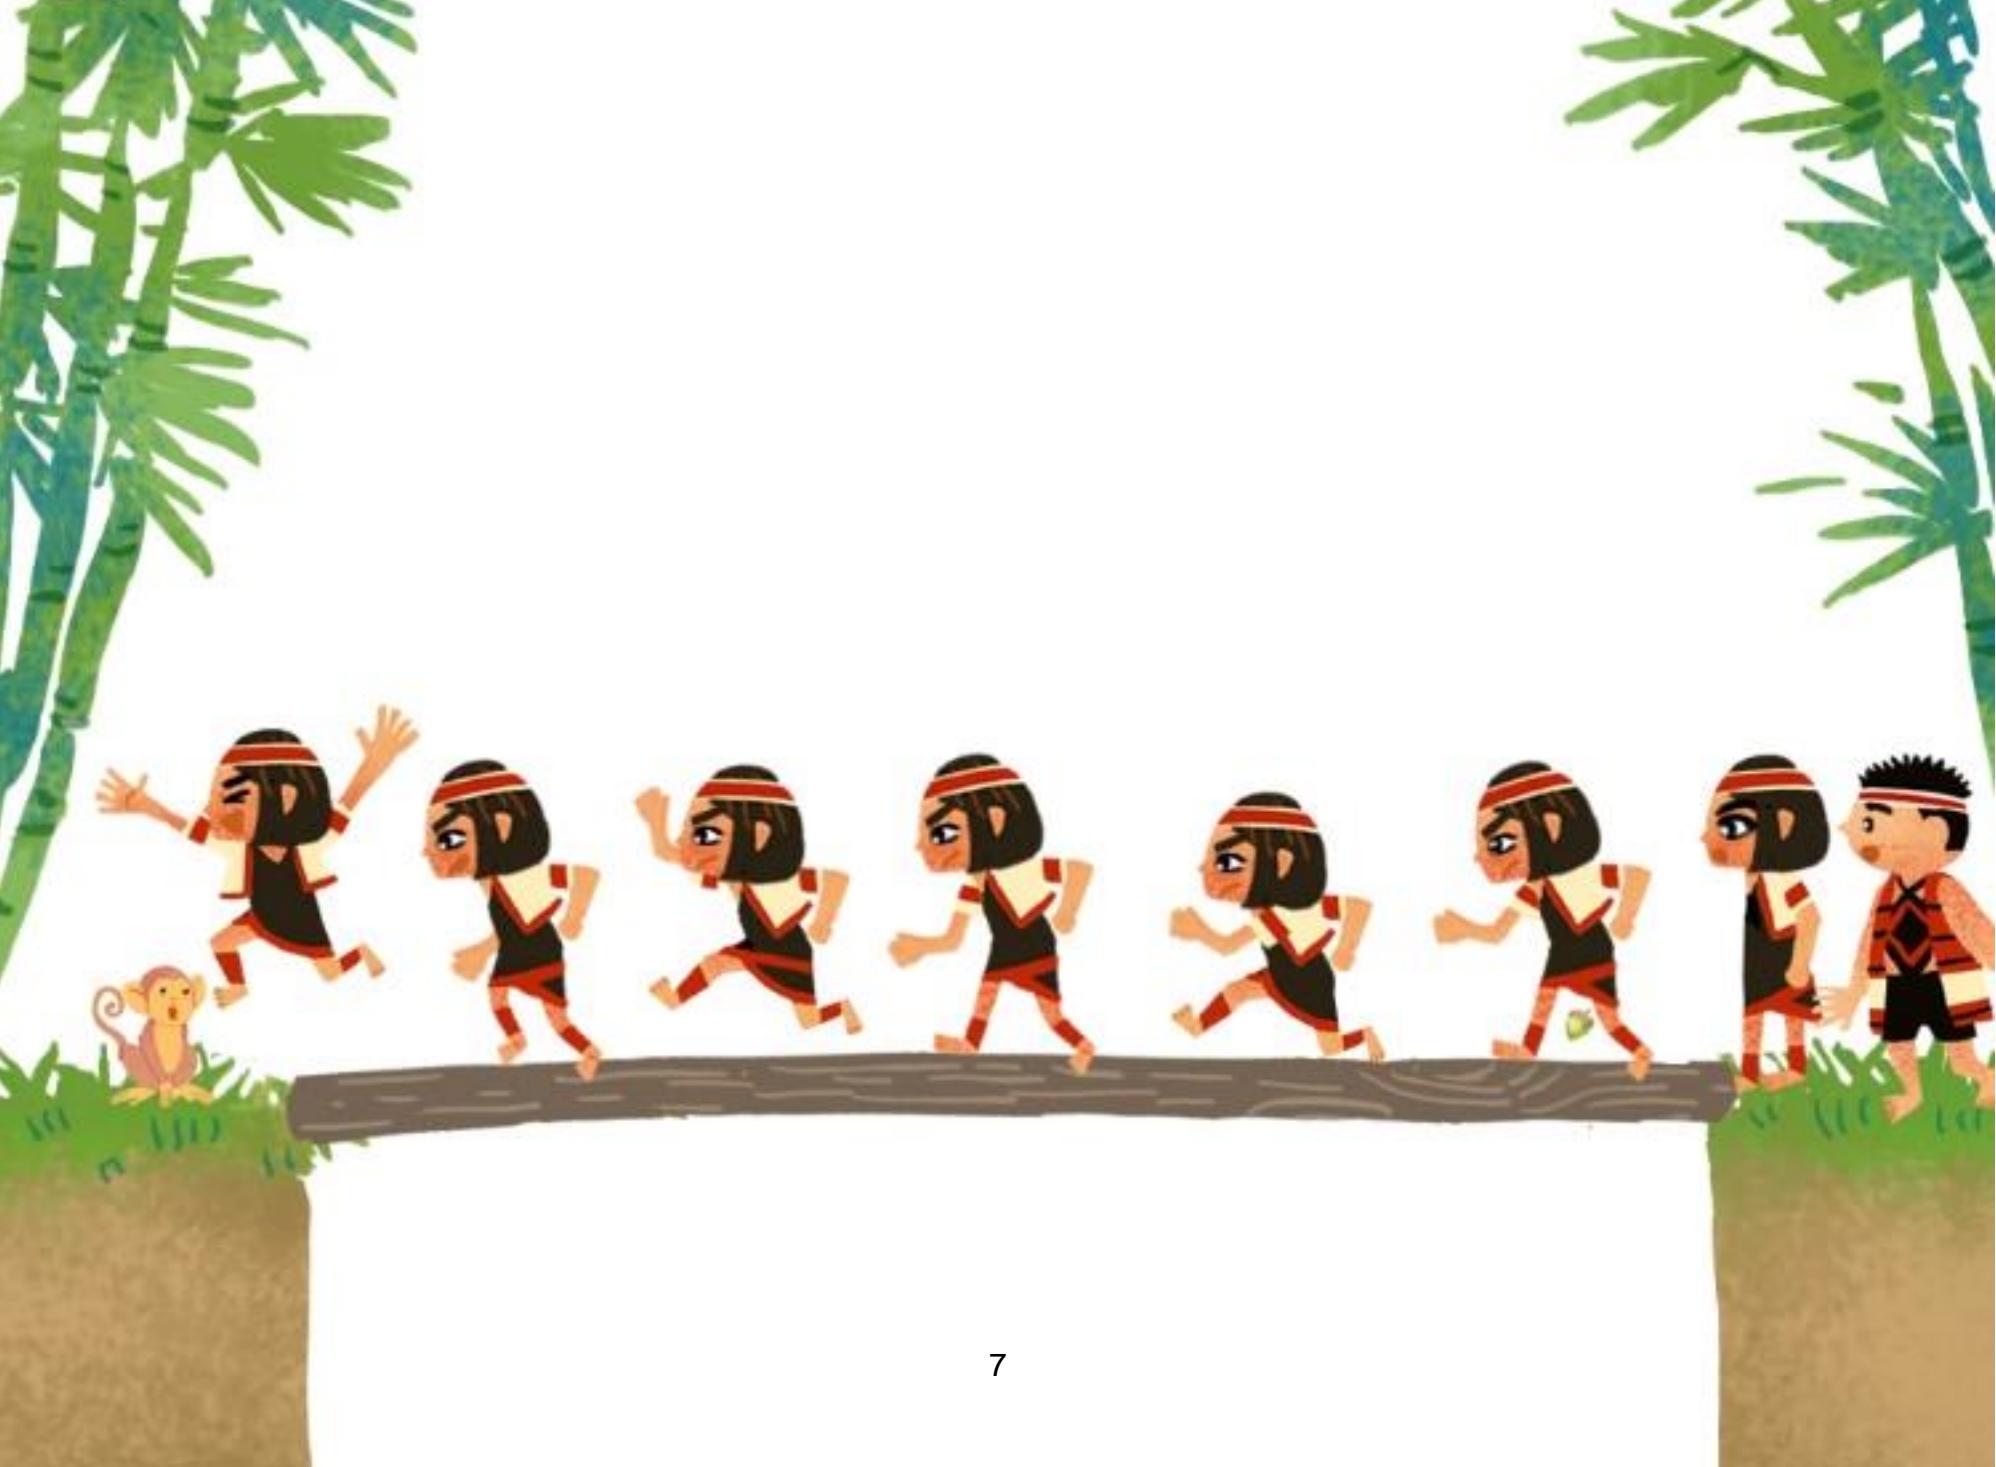

Kui babila pwangwalailai laka  
vawvaalru ku tapudrapalane-ni  
singutaludru.

Nainai ran fast and crossed in only  
eight steps.

乃奈跑得好快，用八步就過橋了。

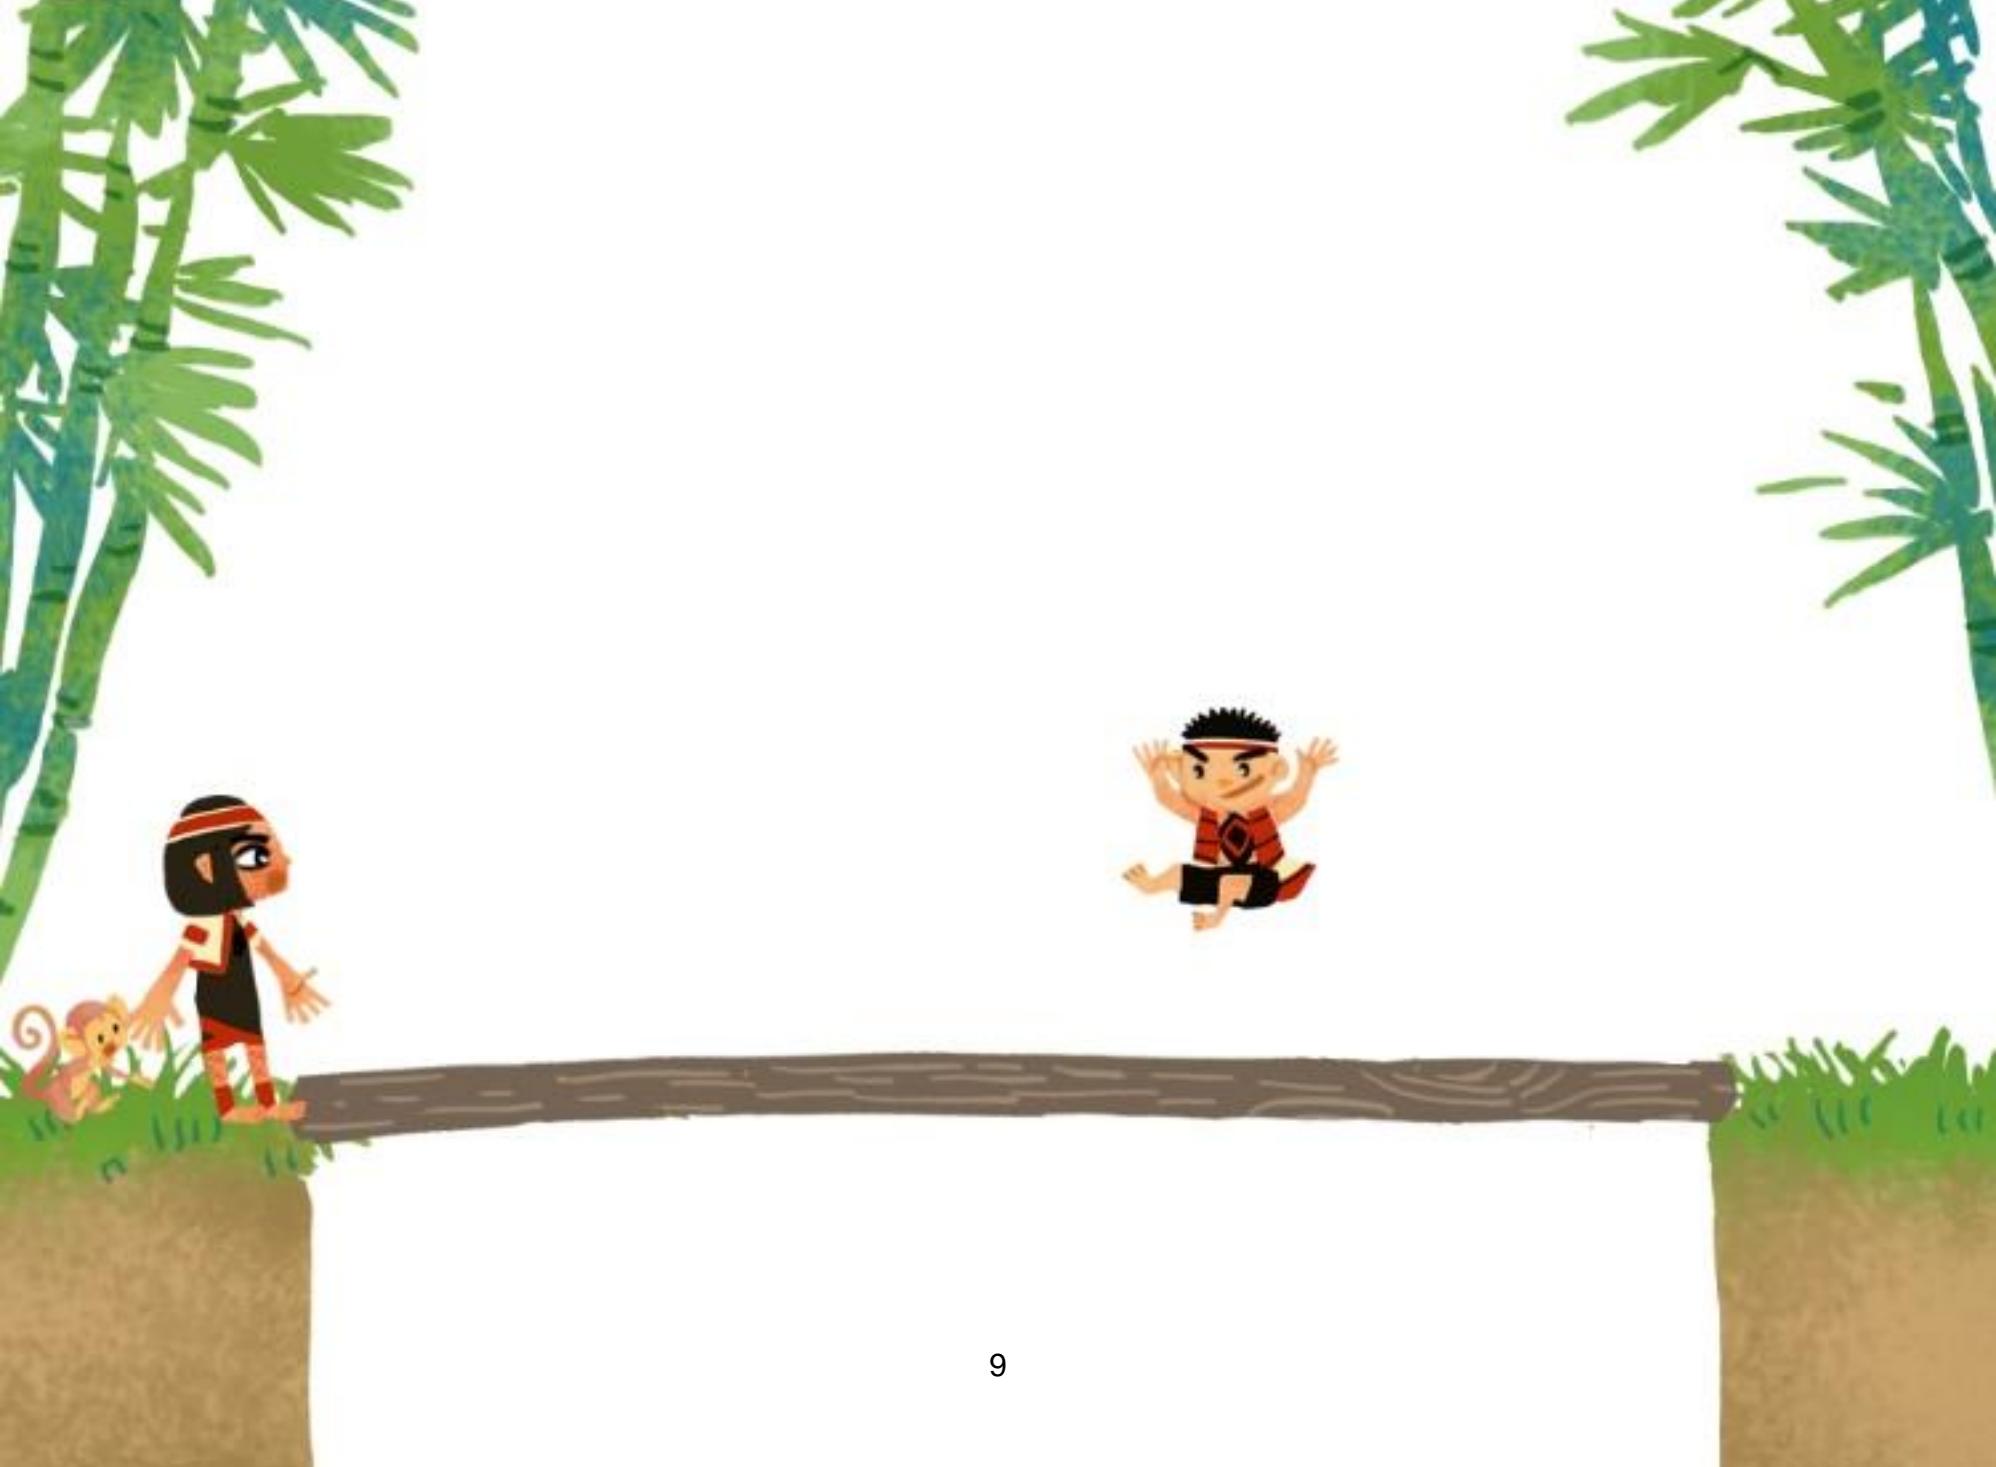

kui Siniyu makiraririmu lailai,  
la arakai kui eneeneme ku  
tapudrapalaneini.

Giwas was faster, taking only six steps.

吉娃斯更快，只用了六步。

Ku Calukusu nawkin vavaale  
pudrapale si lribate ki taludru la-iya.

Behuy wanted to jump across the  
bridge.

飛卉竟然想一次跳過橋。

Saitukunga! al kangetele kui taludru!

Jump! The bridge collapsed!

跳！橋斷了！

Langwadreke kui Calukusu. La-iyakai,  
kainaku ngutalutaludrunga.

Behuy fell off and hurt his leg. He then said he never wanted to cross a bridge again.

飛卉的腳摔得好痛。他說以後再也不要過橋了。

Sadrele kui Siniyu lakasamali. La-iyakai, Iritaratutaludruta kumakucenge, adravane tumanemadu ituku, laikaimaka-kangetele.

Giwas felt really sorry for Behuy, so she wanted to build a bridge for him that wouldn't collapse no matter how hard he jumped on it.

吉娃斯為飛卉覺得很難過。她想要為飛卉建一座怎麼跳也不會斷的橋。

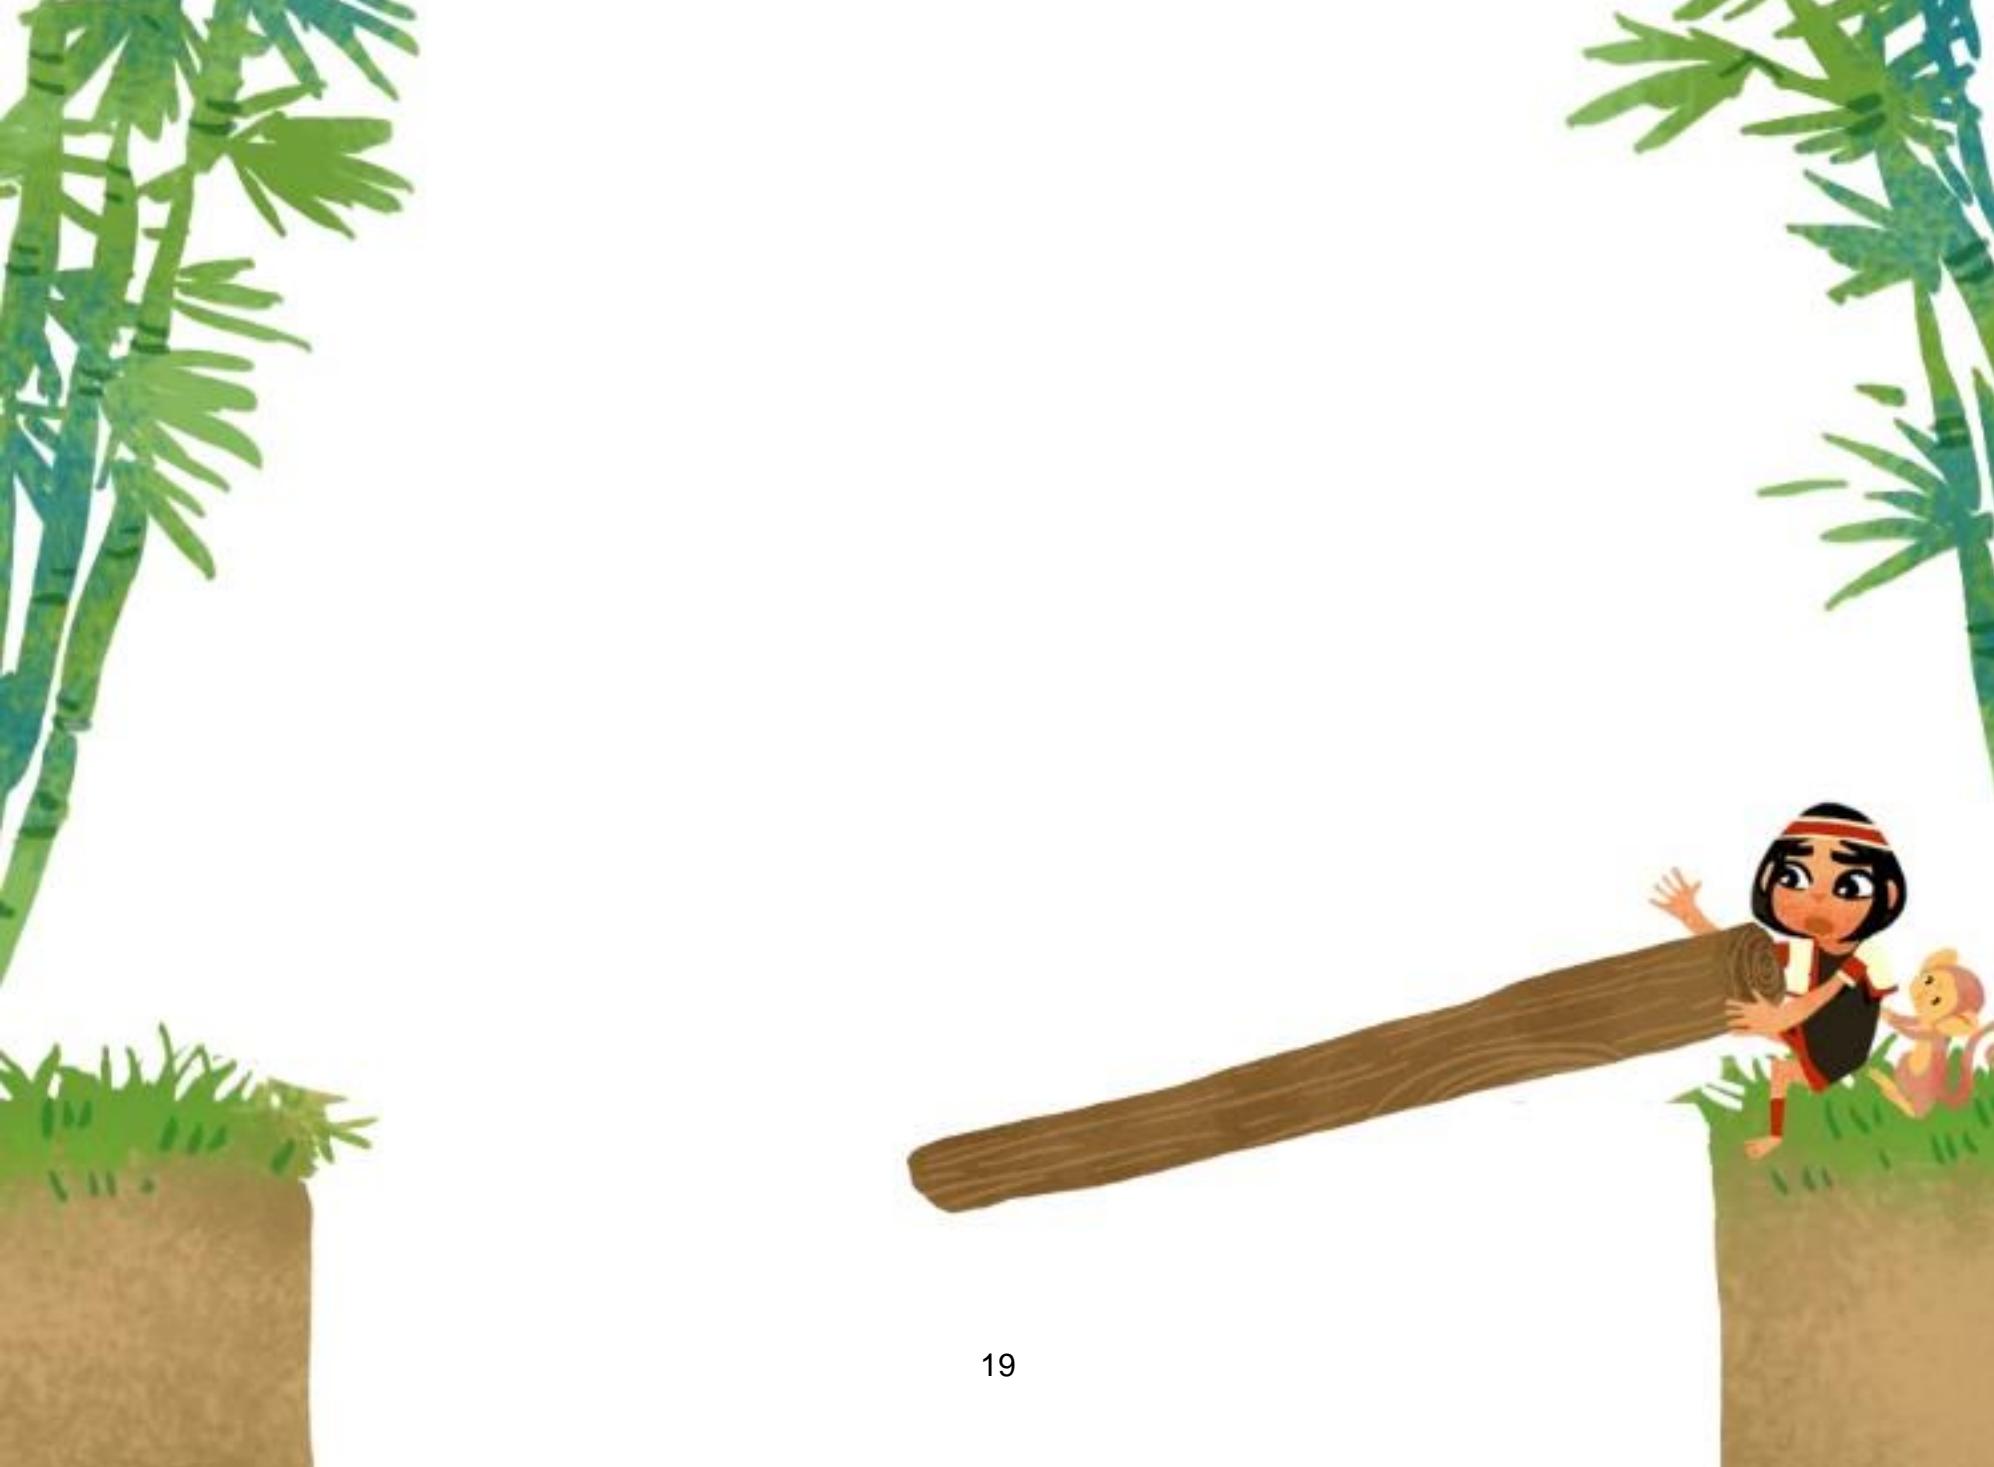

Kui Siniyu si babilia, lakanwas silape ku makucenge ku angatu si pasana tutaludru, lamai-iyakai itarakapapedrenge kai tutaludruta!

Giwas and Nainai found a sturdy piece of wood. A bridge made out of wood should be strong!

吉娃斯和乃奈找到一根很堅固的木頭。  
用木頭建的橋應該很堅固吧！

Ai-ya, edrekanenga kui angatu.

But the piece of wood was too short.

可是木頭太短了。

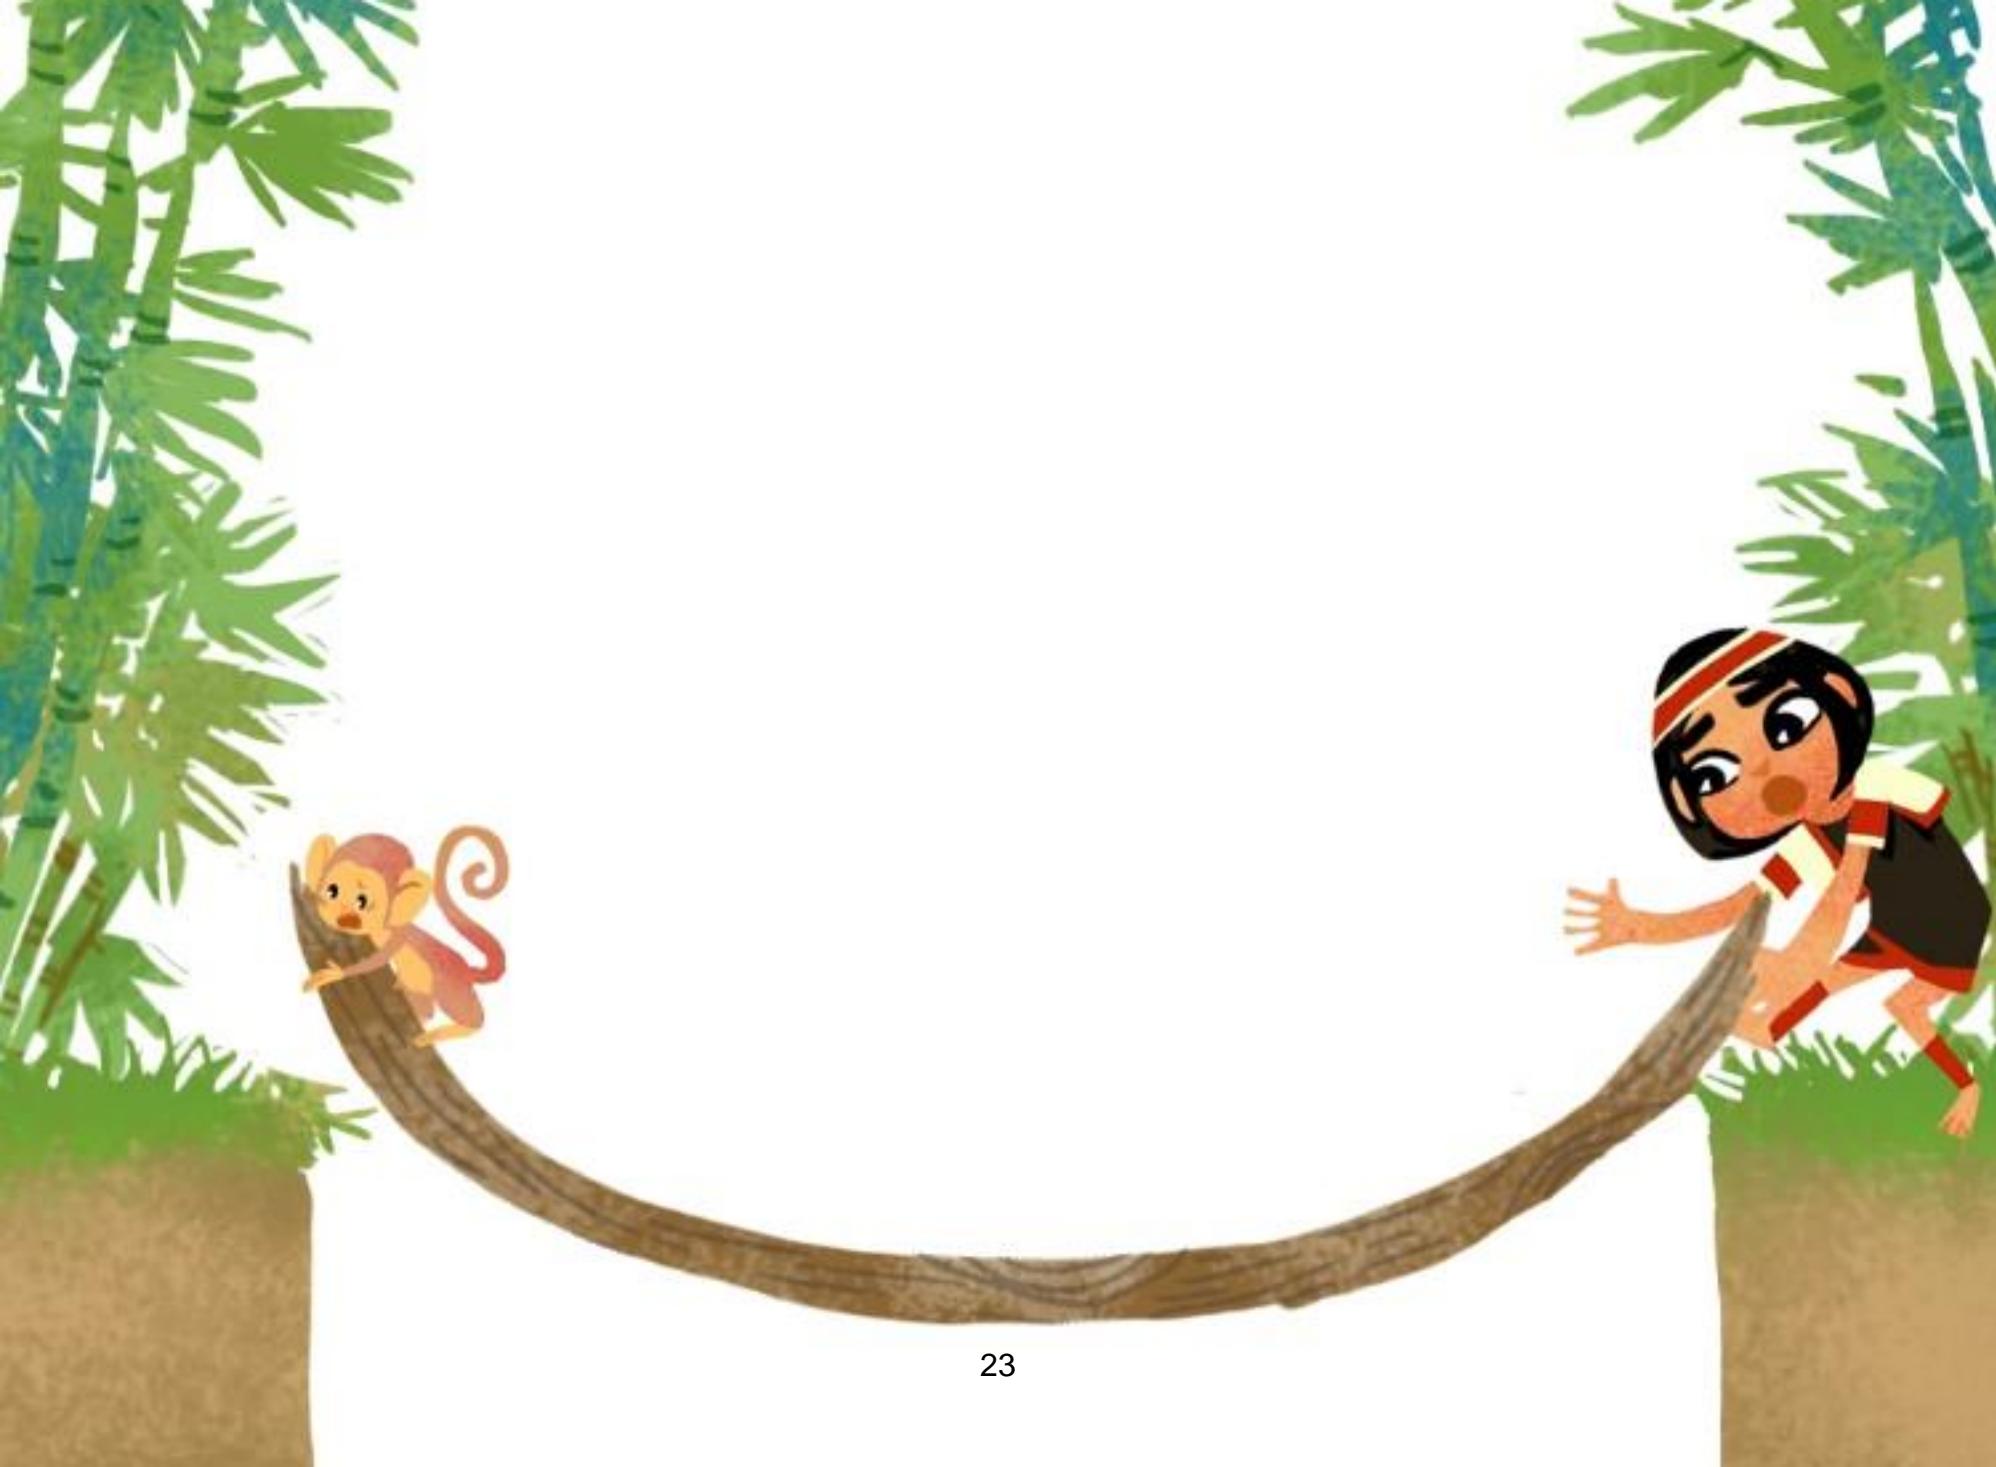

Lalatwas silape kui maelrenge kui  
Irangici ki angatu.

They found a very long piece of  
tree bark.

他們找到了一塊很長的樹皮。

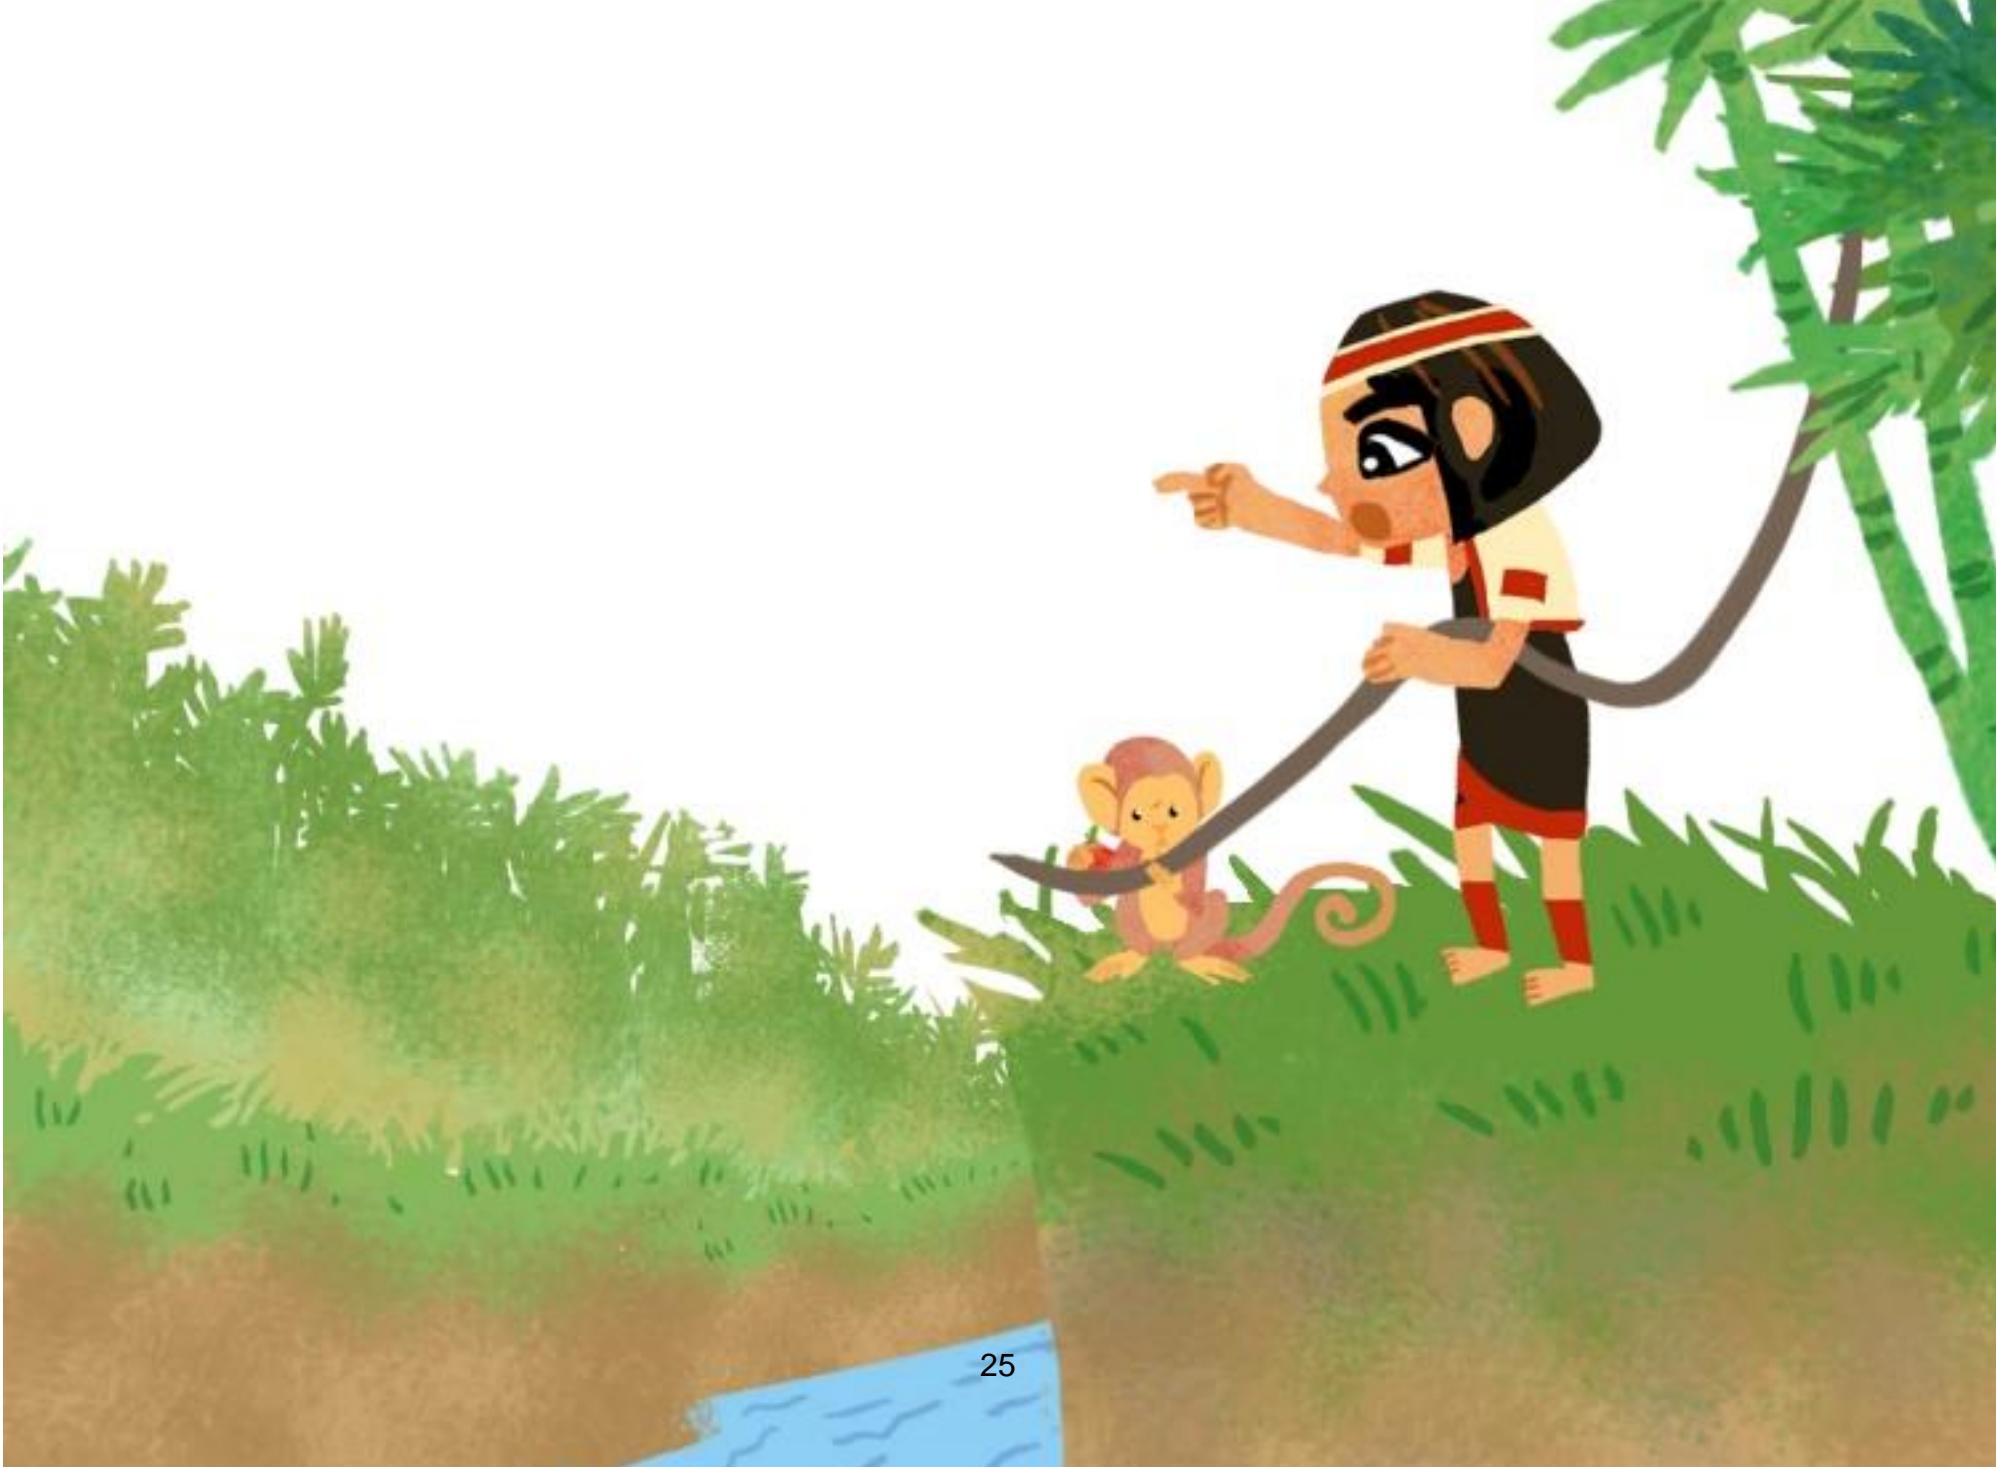

Ai, kailrangici malralruuinga turamuru.

But tree bark is too fragile.

可是樹皮太軟。

Kui Siniyu, la-arakai kui calrisi  
tutaludru.

Giwas tried using rope to build a  
bridge.

吉娃斯還用繩子搭橋。

Kui nyarakaiyane kui calrisi taludru,  
ngyavelevele turamuru, lakiraru-i  
pubelenge kui babilia.

The rope bridge swung around and  
Nainai swung off into the air.

繩子搭的橋，搖來搖去，還把乃奈彈  
得好高好高。

La-iyakai alamakucingalre lutu  
taludrane!

It's so hard to build a bridge!

造一座橋是這麼困難啊！

Lakela kui Kuringici, mapelaela ki  
Siniyu i-yakaai: itumaneta tutaludru?

Bayan arrived! Giwas urgently told  
him of her problem.

巴彥來了！吉娃斯急著找巴彥討論。

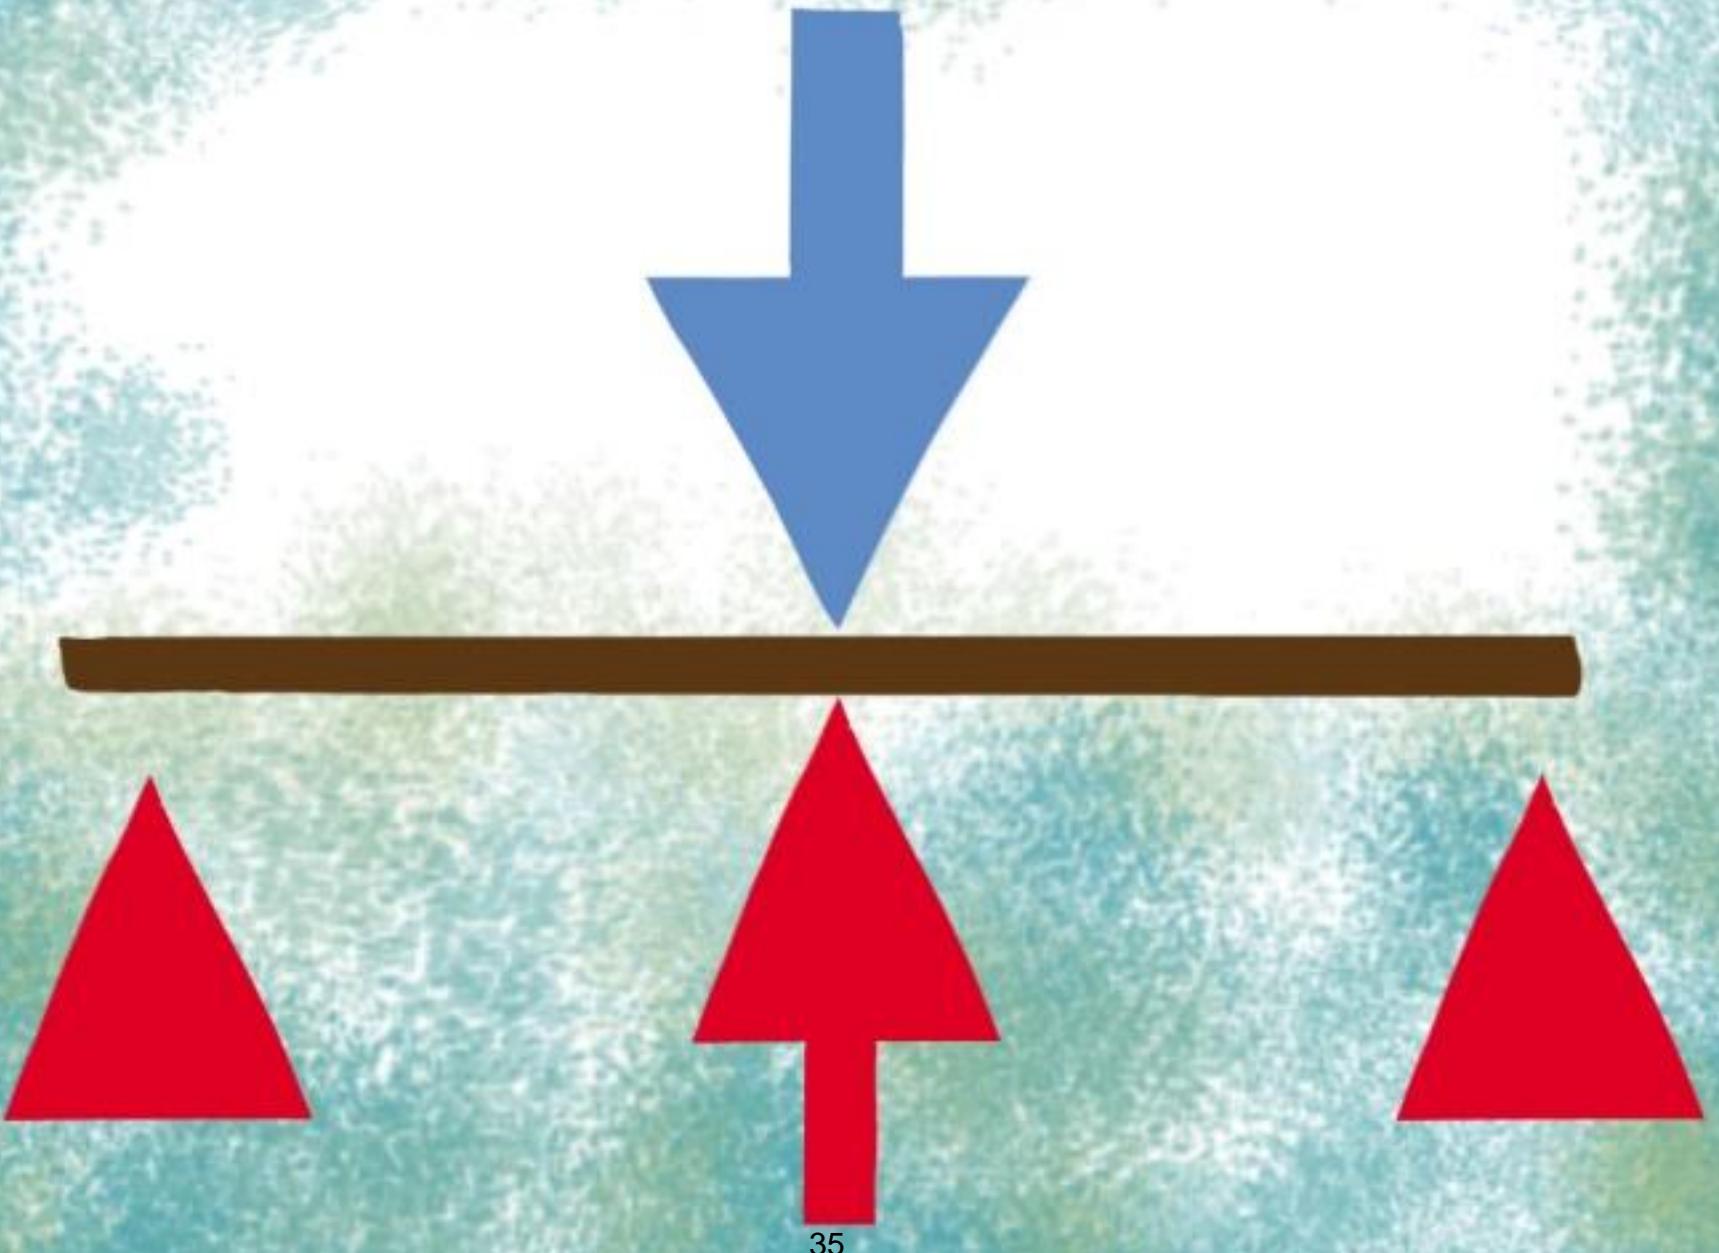

Samapelaelanga alathingale kudra  
tatutalutaludrane. Taravasilapanamadu  
ku sapwalrudrane kaiki taludru  
lakapapedrenge.

Apparently, there are two important factors when building a sturdy bridge.  
The first is to have a steady fulcrum.

原來造一座堅固的橋，有兩件重要的事一定要做。首先要穩固橋的「支點」。

Kutaingeane, kusarakaiyane ku vaedre,  
lukasaniyange ku takavaedrane kailri  
ka ngetele.

The second is to have a vertical support that can withstand applied pressure.

另一件事就是要讓橋本身向上的  
「支撐力」能承擔向下的「施力」。

Ku sapawlrudrane ku angatu, itara  
ikaa-i ki vanale si viri ku sapwalrudrane.

The fulcrum is the set point on  
either side of the bridge.

「支點」就是橋兩邊固定的地方。

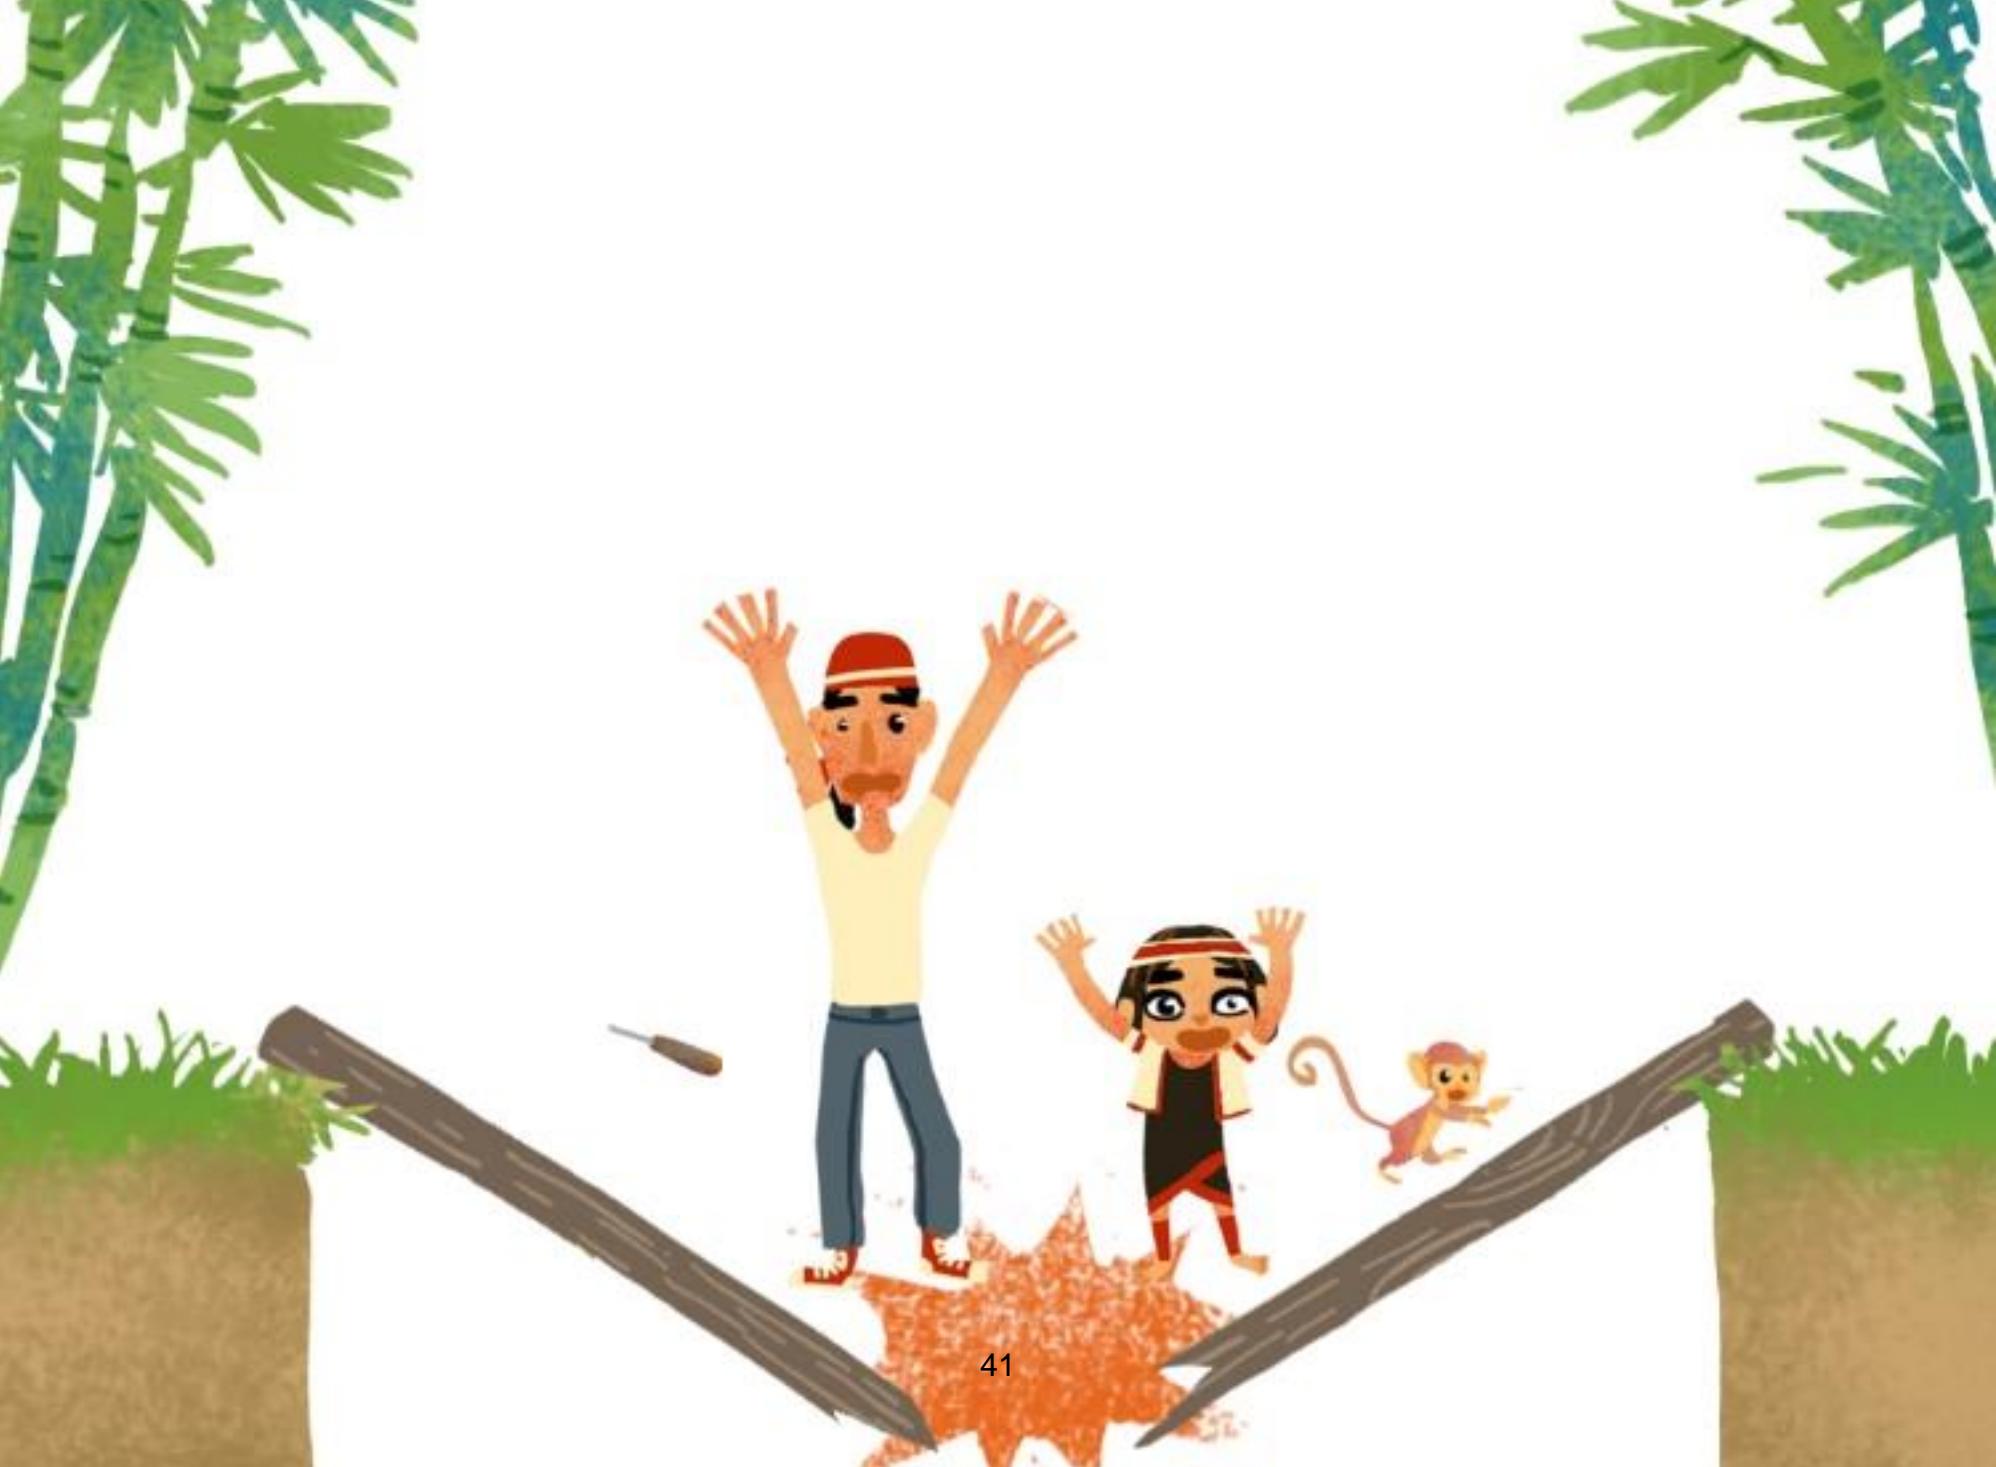

Lu ngutalutaludru ku lawumawbase,  
ku telreganelini taravadrepete ki  
taludru.

When people walk on a bridge,  
their weight produces downward  
applied pressure.

人走在橋上，身體重量會產生向下的  
「施力」。

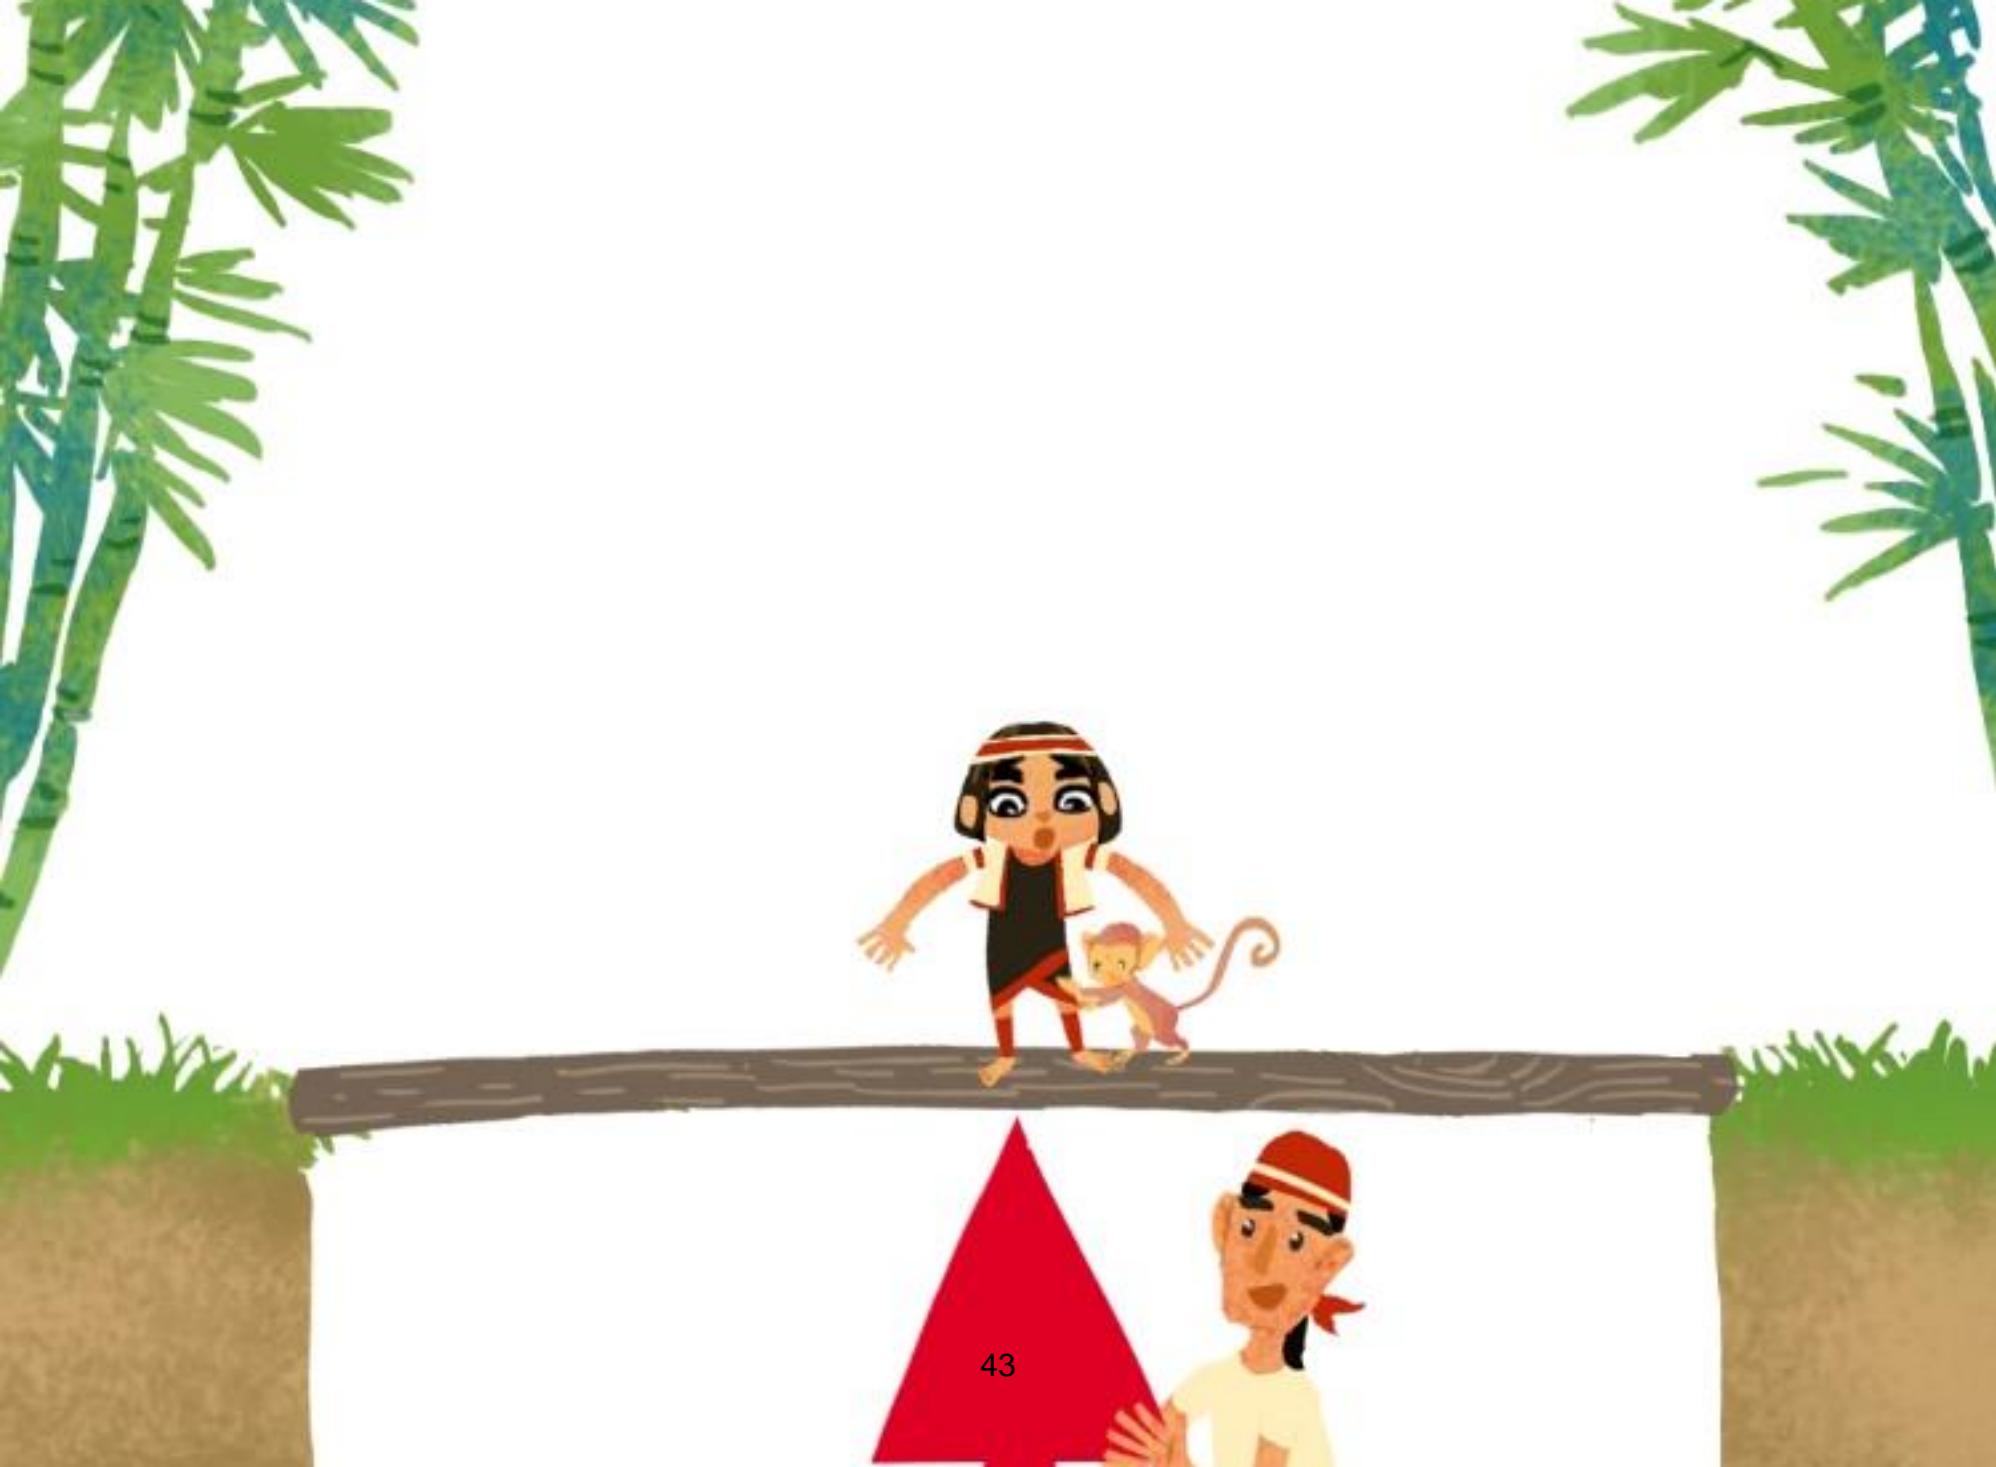

Luikai ki taludru belenge ku umawmas,  
lu arudaili ki sapawlrudrane ki taludru,  
yaru pakilringaw ku telregane, lai tara  
ka ngetele.

The further you are from the fulcrum,  
the harder it is for the bridge to  
withstand applied pressure, so the  
bridge will collapse.

人離「支點」越遠，橋就越無法承擔體重  
的「施力」，最後橋就會斷掉。

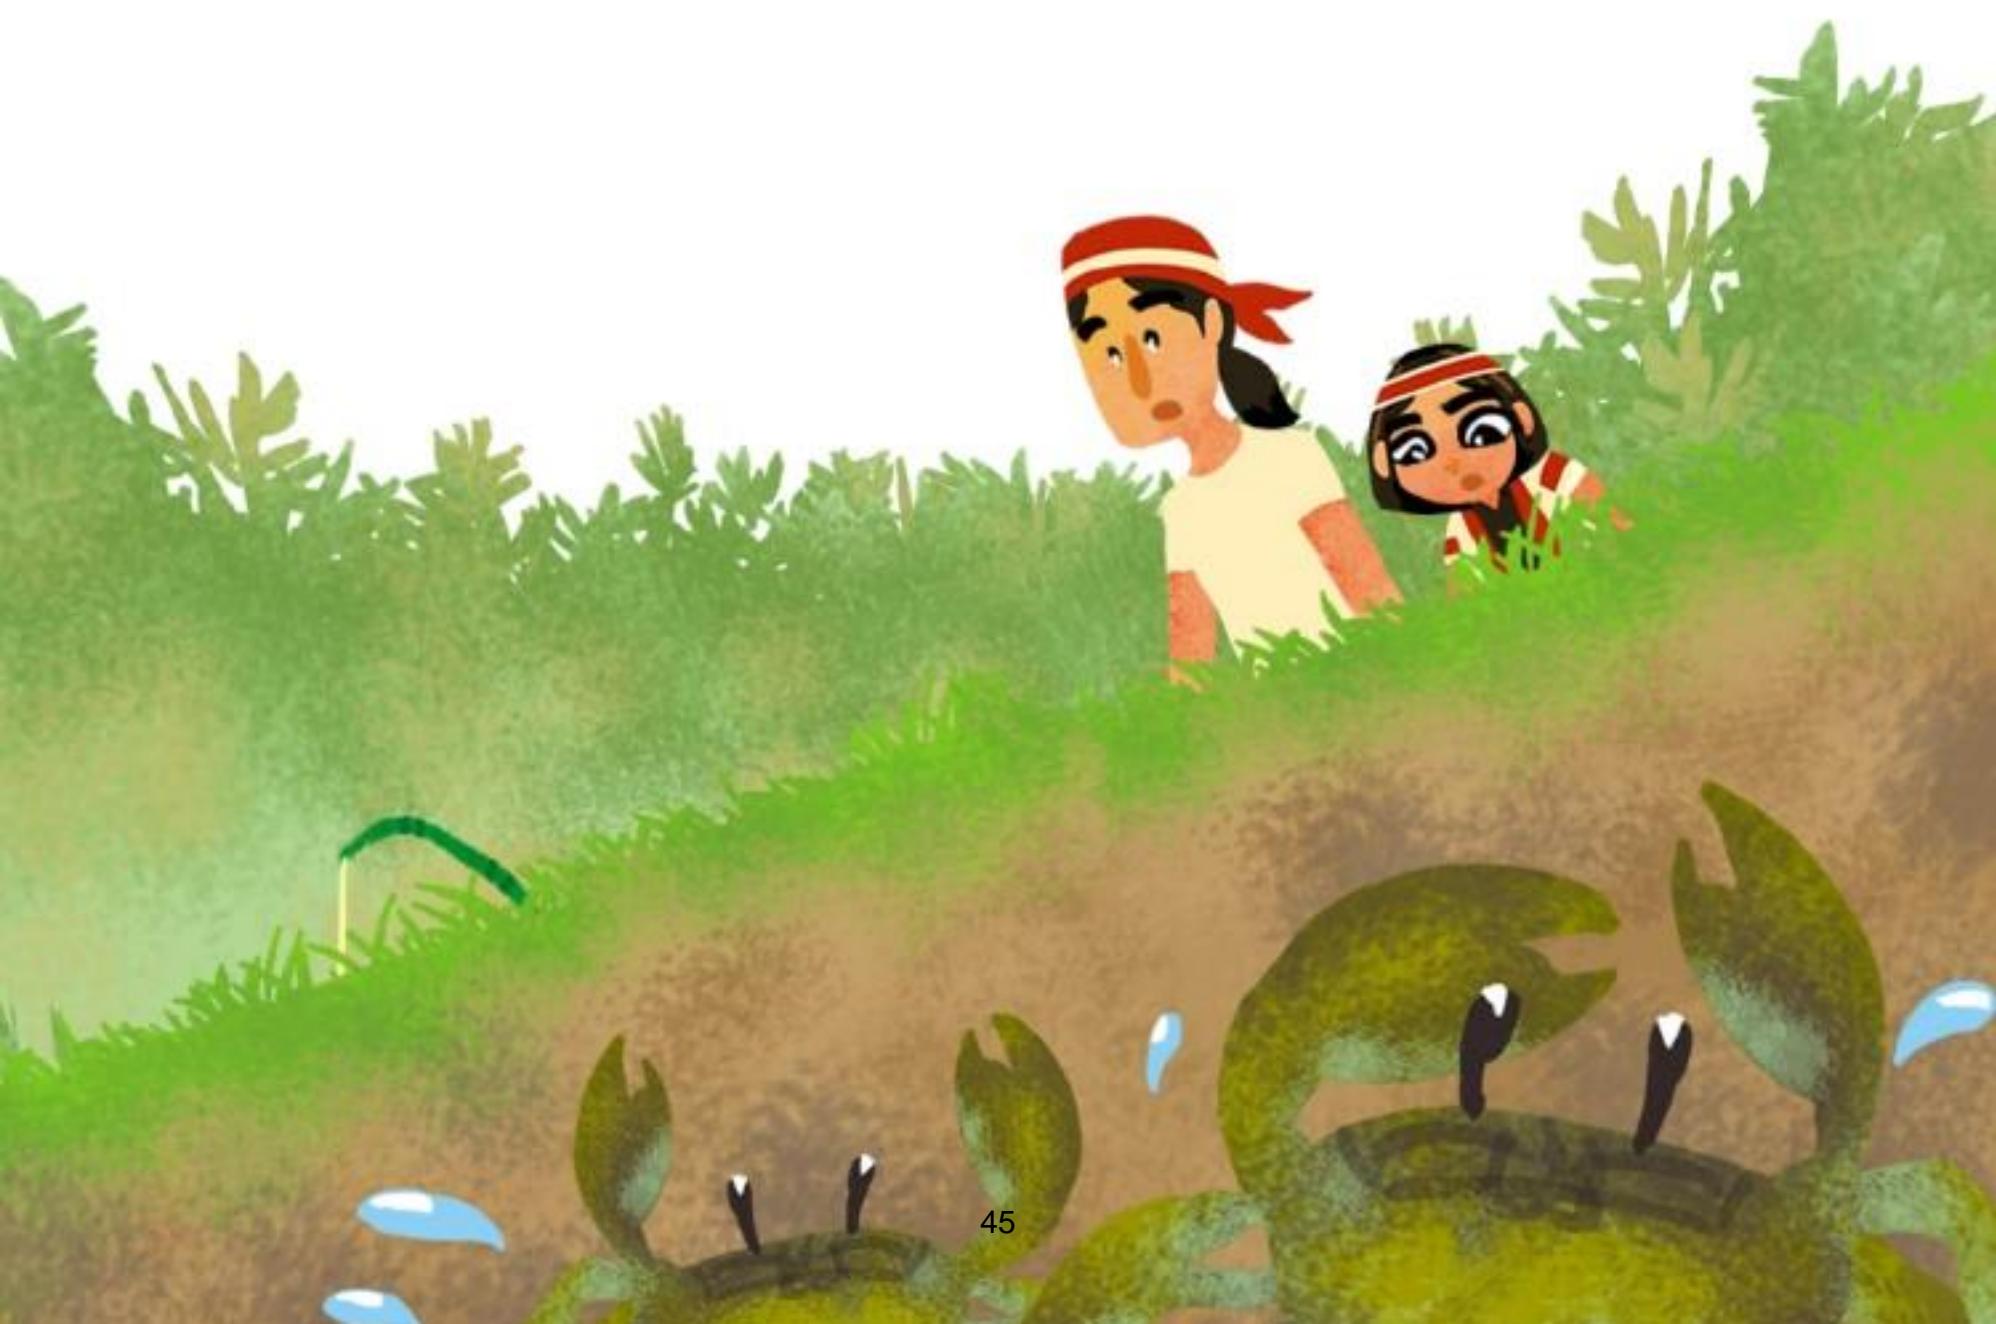

Kui Siniyu lakidremedreme si iyakai,  
anaw drima ku sapawlrudrane pikai  
kabiceacecelrake ki taludru, ani  
arukapapedrenge kai taludru laii-ya.

Giwas realized that to strengthen the bridge all they had to do was add another fulcrum in the middle of the bridge.

吉娃斯想到在離兩邊「支點」最遠的地方，也就是在橋的中間加上一個「支點」，橋就更堅固了。

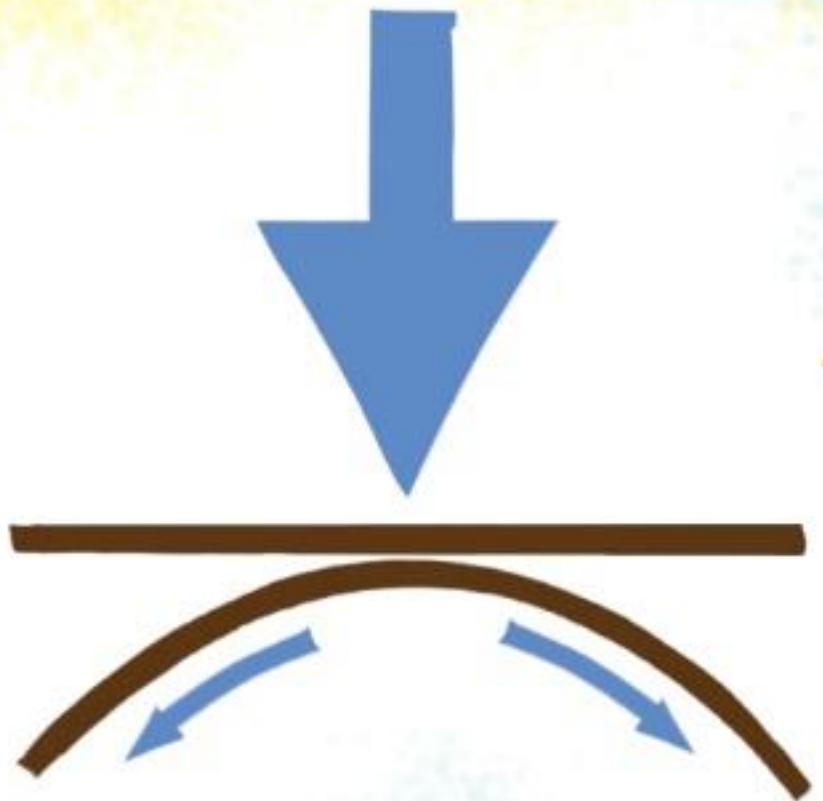

Kui Siniyu la-iyakai: alai-ya si drima  
ku ulrudru pikai ki kabilecakane, lai  
kai tuli-si ku tai kaikaiyane ki la apase  
si lakange?

“But to put a fulcrum in the middle  
would disturb the home of the fish and  
crabs.” Giwas said.

「可是中間的支點會蓋在小魚還有螃蟹的  
家，怎麼辦呢？」吉娃斯說。

Sakabilrlanenga, lamaiyaya kai, takaicegecege pikai kabilricakane ki valru tapangu kilrungu si pakedrekedre pikaibabyabila ki valru. laikaitulisi ku taikaiyane ki lakaange si lapase.

Finally, they decided to build the middle fulcrum in an arched shape, so the force would be applied equally on both sides and wouldn't destroy the fish and crab habitat.

最後他們決定把中間的「支點」做成拱門形狀，讓橋兩邊的山壁一起分擔向下的施力，就不會破壞小魚和螃蟹的家。

Kui Kuringici lasalri ku labalebale, kui  
Siniyu lakamani ka vaerece ku calrisi,  
ala ku babilia wamalra kui akaneanelini  
kui belebele.

Bayan hauled bamboo, Giwas tied it  
together, and Nainai prepared a  
banana lunch for everyone.

巴彥搬竹子，吉娃斯綁繩子，乃奈為大  
家準備香蕉午餐。

Lamakavavaale si tulrupenge kui  
taludru.

They worked for the whole day  
and finally finished the bridge.

大家忙了一整天，終於把橋蓋好了。

Kui babila la-ititituku ikai ki taludru  
padredrele ki Calukusu.

Nainai jumped on the bridge to  
show Behuy it was safe to cross.

乃奈在橋上面用力跳給不敢過橋的  
飛卉看。

Sakabilrilane, ala ngubangalre ngutaludru  
kui Calukusu si kai ka kyukyucunga!

With everyone's encouragement, Behuy finally crossed the bridge and jumped up and down happily. Behuy would never be afraid of bridges again!

在大家的鼓勵下，飛卉終於走過橋，還在橋上開心地跳。飛卉再也不怕過橋了！
